Education

2021 **B.E.(CSE),** *Shri Shankaracharya Technical Campus*

2017 **12th,** *Kendriya Vidyalaya Ambikapur*

Skills

MongoDB
Express.js
React.js / Vite
Node.js
React Native / Expo / Ionic
Javascript / Typescript
TailwindCSS
REST API
HTML / CSS
Firebase
Redis
Redux Toolkit
Next.js
Feather.js
PostgreSQL
TanStack React Query
Motion
Nest.js
React Hook Form
Three.js
AWS S3
Git
Context API
Jira
Swagger
Postman
Electron.js
Ethical Hacking
Data Structures and Algorithms
Python/ Django/Flask

Certificates

Professional Experience

FunctionUp,*Backend Developer (July 2022 - Sep 2023)*
Worked in backend development using Node.js and Express, and developed applications with MongoDB for data storage. Worked with AWS S3 for file storage and Redis for caching and performance optimization. Gained hands-on experience with GitHub for version control and collaborated effectively with teams to deliver projects on time. Developed strong problem-solving skills while working on real-world projects.
Experienced in building REST APIs and developing frontend applications using React.js.

Percipience Labs LLP,*Junior MERN Developer (Oct 2023 - Jan 2024)*
Worked on Android app development using React Native and Ionic frameworks, contributing to the development of multiple applications, including SocialOut, Messaging, Retentive, and a Payment Gateway system and Firebase for authentication.
Integrated backend services using Node.js, ensuring smooth communication between the front-end and back-end components.
Played a key role in implementing intuitive UI/UX design for mobile apps, enhancing user engagement and experience.

Atrox Technology, *SDE-I (Feb 2024 - Dec 2024)*
Contributed to Android app development with React Native and Expo, focusing on building user-friendly mobile applications.Developed backend systems using Feathers.js to provide a robust API for mobile app functionality.
Created the company website using Next.js, ensuring high performance and SEO optimization.
Played a key role in implementing intuitive UI/UX design for mobile apps, enhancing user engagement and experience.
For a web APP Integrating React.js and Nest.js for building scalable, maintainable applications.

Vexalink, *Full Stack AI Developer (Oct 2025 - Feb 2026)*
Contributed to the development of a PERN stack–based healthcare platform by designing and implementing scalable REST APIs to support appointment workflows and patient intake processes. Integrated AI-driven call automation through webhook-based workflows to enable automated patient interaction and structured data extraction from calls. Built CSV/Excel import and export pipelines for bulk data processing and system synchronization, and implemented cron-based scheduled jobs to automate operational tasks. Also improved backend performance through database query optimization and efficient API design, while developing and maintaining multiple backend modules following clean and modular architecture practices.

Projects

AI Landing Page Generator ->GitHub Link
A full-stack AI-powered chatbot application designed to facilitate interactive conversations between users and an artificial intelligence model. It includes secure user authentication (JWT & Google OAuth), stores conversation history, and is built for scalability and performance.

Crypto Dashboard->*GitHub Link*
A real-time cryptocurrency dashboard built with React + TypeScript + Tailwind CSS + Axios + Recharts. It fetches live data from the CoinGecko API and displays in price charts (auto-updating every 30s), top market data (coins, market cap, price changes) with optimized with custom hooks, data caching, and interval updates

E-Commerce Shopping Cart->*GitHub Link*
For an e-commerce platform, I built backend APIs to manage users, products, carts, and orders using Node.js and MongoDB. I integrated JWT for authentication, Bcrypt for password encryption, and AWS S3 for image storage.

Login->*GitHub Link*
I also developed a backend for an itinerary app, allowing users to register, log in, and manage their travel plans. The system used JWT for secure user authentication, with front end using react.js

Search Images ->GitHub Link
For an image search app, I built the front-end with React.js and integrated the Pexels API to fetch high-quality images. I added pagination to manage large volumes of search results efficiently.
